Identity

Other names: FACD (Fanconi anaemia complementation group D)
Location: 3p24.2
Local order: not far to XPC, in 3p25.

DNA/RNA

Description
Yet unknown; only localized.

Prognosis
Poor; mean survival is 16 years: patients die of bone marrow failure (infections, haemorrhages), leukaemia, or androgen therapy related liver tumours.

Cytogenetics
Spontaneous chromatid/chromosome breaks; increased rate of breaks compared to control, when induced by breaking agent.
