**Clinics and pathology**

**Disease**

Found so far in 6 cases of chronic lymphocytic leukemia (CLL), 1 diffuse, mixed small/large cell non Hogkin lymphoma (NHL), and 3 cases of acute lymphocytic leukemia (ALL): one T-ALL and two (CD10+) B-ALL.

**Epidemiology**

Sex ratio: 5 male and 5 female patients; CLL cases were aged 10, 15, 58, 59, and 62 years; ALL cases were 2, 4, and 5 year old children.

**Prognosis**

5 CLL cases were dead after 27-49 months survival; the 3 ALL cases were alive at 29+-34+ months of follow up.

**Cytogenetics**

**Cytogenetics morphological**

Sole anomaly in 2 of 8 documented cases; often found in complex karyotypes; no recurrent accompanying anomaly so far.

**Genes involved and proteins**

**BCL11A**

**Location**

2p13-15

**Protein**

6 Kruppel C2H2 zinc fingers, a prolin rich domain, and an acidic domain.

**IgH**

**Location**

14q32
